Parallel access LAN/WiFi

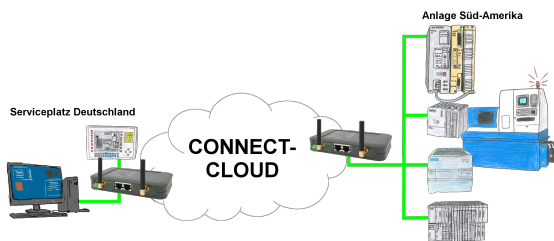

Access parallel via LAN and Wifi to the EtherSens-device. Therefor create via the web-server for each way an ip-address, regardless whether its the same subnet or not.

Protection for data-dump and modification

You want to protect your system against unauthorized access and changes? No problem, with the S7-firewall you secure your system against unauthorized access and thus prevent deduction or alteration of your system and process data.

Worldwide remote-access thanks to our own cloud

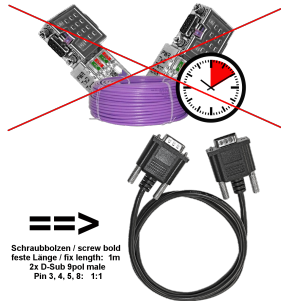

Worldwide remote-maintenance without additional costs thanks to our own cloud

Your devices connect to your own cloud, no matter where they are in the world. Only your devices are in your own private cloud, no one else has access to the cloud. In addition, you can provide each device with its own connection-password, so that the individual systems are protected despite the private cloud.

No registration on any portals, no hidden additional costs, your devices in your own cloud are always accessible.

This is how remote maintenance/remote access is fun.

Save time and money

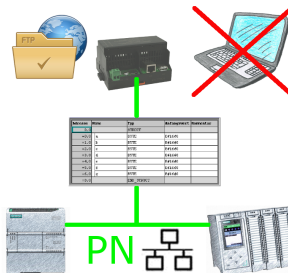

Connect panel to PLC or PLC to PLC, why waste time and money unnecessarily?

Get an expensive bus-cable, screw the bus-connector and also make the classic mistake in the wiring (shield-connection to bus-line). Why all this effort when there is a ready-made solution:

MPI/Profibus-connection-cable with a length of 1m, cast D-Sub-housing with screw-bolts. Only the signals A + B (bus itself), ground and RTS-AS are 1to1 applied, so no problems with possible voltages, compensating currents.

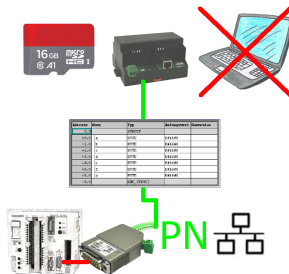

Simply plug it on to the MPI- or Profibus-interface, screw it on and communicate.

Data backup S7-PLC PN-port on FTP-server

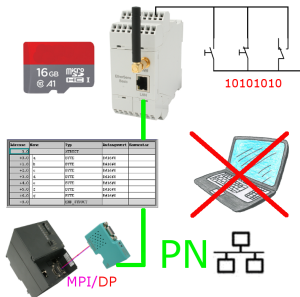

S7-PLC triggered DB-backup/-restore without additional PC via PN-port on FTP-server

Data backup S5-PLC on SD-card

S5-PLC triggered DB-backup/-restore without additional PC via PG-socket and Ethernet on SD-card

Data backup S7-PLC over MPI/Profibus on SD-card via dig. IO

Via digital input triggered DB-backup/-restore without additional PC via MPI/Profibus to SD-card
